VITYARTHI DIGITAL LITERACY

NAME – VEDANT KHANDELWAL

REG. NO. – 25MEI10120

COURSE CODE – CSE0001

ACADEMIC YEAR – 2025-26

Introduction

In the modern digital age, being technologically savvy has become a necessary skill. Digital literacy not only requires students to be proficient in using technology but also to use technology responsibly, safely, and efficiently. With the increased need for the internet in education, communication, and other activities, students need to be technologically proficient.

The project aims to enhance students' digital literacy skills by incorporating various activities, including creating an infographic, developing a professional online portfolio, exploring coding sites, understanding email etiquette, and analyzing cybercrime scenarios. This will help students become aware of the importance of online safety, enhance their communication skills, and develop a professional online presence. This project will help students become proficient in using technology responsibly.

Task 1 Report : Digital Literacy Awareness Infographic

For this task, I was required to develop an infographic on the topic of Digital Literacy Awareness using Canva. The objective of developing this infographic was to effectively communicate concepts related to digital literacy in an easy-to-understand format. The infographic included major concepts such as the concept of digital literacy, various digital tools that can be used by students, how to use the internet in an effective way, how to develop an online professional image, and how to develop proper email etiquette.

The major challenges faced by me in completing this task were to effectively balance content and design. This was because it was important to ensure that the content was short yet included all major concepts. However, it was also important to develop an infographic that was visually appealing. Overall, this task was helpful in developing my skills in effectively summarizing information.

Task 2 Report: Student Digital Portfolio

In this task, I created and updated my profiles on various online platforms to develop my professional digital portfolio. I used GitHub, LinkedIn, and STACK OVERFLOW etc, to develop my digital presence online. I created a profile README on GitHub to describe myself, mention my academic qualifications, and state my interests in software development.

GitHub is useful for displaying profiles and monitoring coding progress. I also created a profile on LinkedIn and filled in all the information required to complete my profile. I filled in my academic qualifications, professional headline, and a summary stating my interests and goals. LinkedIn is useful for networking and career opportunities.

I also created a profile on StackOverflow, it is useful for solving programming errors and finding coding problem solutions through online discussions.

I learned that it is essential to develop a professional online presence and that I should start developing a strong digital identity to support my academic and professional growth.

Task 3 Report : Coding & Collaboration

In this task, I have used the HackerRank and Google Forms platforms to learn about coding and collaboration. In the case of coding, I have taken a beginner-level coding challenge using the HackerRank platform. This has helped me learn problem-solving techniques and has also improved my logical thinking skills. In addition, I have gained knowledge about structured coding and programming concepts.

In the case of collaboration, I have created a Google Form based on Digital Literacy Awareness. This has helped me learn about designing quizzes and understanding the efficient usage of Google Sheets for better results.

These tools will be highly useful for my academic growth, as I can utilize the HackerRank platform for improving my coding skills and Google Forms for creating surveys and completing my projects. This task has helped me grow in terms of technical knowledge as well as collaboration.

Task 4: Professional Email & Etiquette Guide

During this task, I learned how to effectively communicate in a professional online context by writing two emails and designing an online etiquette checklist. The emails included one to my professor asking for an extension on an assignment and another to an internship coordinator expressing interest in an internship.

While writing these emails, I kept in mind how effective communication is important in an academic context. I also created an online etiquette checklist of do's and don'ts that included how important it is to remain professional online.

This task was helpful to me because it allowed me to understand how effective communication plays an important role in an academic context.

Task 5: Cybercrime Awareness Case Study & Prevention Guide

In this task, I learned about cybercrime through the case study of UPI payment fraud. I learned how such frauds are perpetrated step by step, the common victims, and the consequences, including financial and security threats. I realized how easy it is for anyone to become a victim of online scams due to lack of knowledge.

I also created a checklist on how to prevent cybercrime, with specific safety tips, focusing on online transactions and data privacy. I included specific information on how to remain safe while using UPI, along with information on how to report such cases through the National Cyber Crime Portal and the helpline number 1930.
I learned how cybercrime can increase my online awareness, thus adopting safe online habits in my daily activities.

Conclusion:

The project has helped me achieve a wide understanding of the concept of digital literacy and the significance of the concept in the modern world.

Through the various tasks undertaken in the project, I have acquired knowledge on the use of technology, the maintenance of professionalism on the internet, coding, and communication through emails.

In addition, the project has helped me develop knowledge on the safety of the internet and the prevention of cybercrimes.

The project has helped me develop my technical, communication, and analytical skills, and I believe that the knowledge and skills acquired in the project are essential in my academic and professional future.
